

## #1 Internet Filter for Apple & Android Devices

Use SPIN Safe Browser to block pornography, inappropriate content, and keep Bing.com, Google.com and Yahoo.com web and image searches safe. SPIN also makes the most popular video searching platform safer by automatically invoking its Restricted mode.

CHILD FRIENDLY WEB SEARCHING YOU CAN WALK AWAY FROM

SUITABLE FOR ANY AGE GROUP IN THE HOUSEHOLD

# SPIN Safe Browser

### GOOD POINTS

1. It is supported by the top search engine brands in the world
2. It is very reliable at filtering out inappropriate content
3. You can hide pictures from appearing at all in our searches, if you select this in the settings.
4. You are automatically blocking pop up windows when you use SPIN, stopping adverts from appearing

### BAD POINTS

1. It is a filter; some things will still creep through that may be inappropriate.
2. If you do not hide other search engine apps such as Google and Safari on the device, they can just use them. So be sure to hide / delete those other apps.
3. The app does not have a reporting feature, so if you stumble across content that is not appropriate you cannot point this out to the developers.

### Parent Opinion:

*Mother of a 7 and 12-year-old*

*What an idea! Wish I discovered it earlier to be honest. Have no issues with it so far, seems easy to use just like google really and my kids do not really see any difference as it works just as fast and looks just like google when you open it up. So far so good, nothing bad has popped up!*
